

# PMDX-407

## How to determine your Mach4, SmartBOB plug-in and SmartBOB firmware version

One of the first questions we will ask you when trouble-shooting a Mach4/PMDX-SmartBOB issue is what version of Mach4, PMDX-SmartBOB plug-in and SmartBOB firmware you are running. You can find all of this information in a few handy places:

(1) When running Mach4, go to the "Diagnostic" menu and select the "PMDX-SmartBOB-USB".

\*OR\*

(2) When running Mach4, go to the "Configure" menu and select "Plugins..." and then select the "PMDX SmartBOB-USB". This is slightly different in older versions of Mach4 - go to the "Configure" menu and select "Plugins...". This will display the "Configure Plugins" dialog. Look for the "PMDX-SmartBOB-USB" line and click on the "Configure" button.

\*OR\*

(3) Exit Mach4 (if you were running it). Open Windows Explorer or My Computer and navigate to the Mach4Hobby directory, usually C:\Mach4Hobby. Then change into the "Profiles" directory. Then change into the directory for the profile that you are using. For example, if your profile name is MyMillProfile, you will go to:

C:\Mach4Hobby\Profiles\MyMillProfile

Look for a file named "PMDXVersionInfo.txt". That contains all of the information displayed in (1) and (2) above.

As of our plug-in version 0.44.214 (Jul 2016), that information looks something like this:

Tue Aug 02 14:49:07 2016  
Mach4 Build#: 2914  
Screen Set: wx4.set  
PMDX SmartBOB-USB Device: PMDX-416 [Rev A PCB] on COM4  
PMDX SmartBOB-USB Serial Number: SN99999  
PMDX SmartBOB-USB Plug-In Version: 0.44.214  
PMDX SmartBOB-USB BootLoader Version: 1.13.73  
PMDX SmartBOB-USB Firmware Version: 0.51.178
